

MLRun Installation Guide

<https://docs.mlrun.org/en/stable/install/kubernetes.html>

Install docker-desktop [Link](#)

Enable Kubernetes in the setting.

Install helm [Link](#)

Use python 3.9

Create namespace:

```
kubectl create namespace mlrun
```

Download mlrun_ce:

```
helm repo add mlrun-ce https://mlrun.github.io/ce  
helm repo update
```

Create secret

```
kubectl --namespace mlrun create secret docker-registry registry-credentials --docker-server  
https://index.docker.io/v1/ --docker-username your_docker_username --docker-password  
your_docker_password --docker-email your_email_id
```

Display mlrun-ce into k8s:

```
helm --namespace mlrun install mlrun-ce --wait --timeout 1800s --set  
global.registry.url=index.docker.io/saileshpanda97 --set  
global.registry.secretName=registry-credentials --set kube-prometheus-stack.enabled=false  
mlrun-ce/mlrun-ce
```

Jupyter UI is available at:

localhost:30040
